Document Hyperlinking

Project Summary

10.06.15 - The Document hyperlinking project has been ongoing in Boone County since early 2004. After several revisions of the "Proof of Concept" were completed, a final solution was implemented in the spring of 2008. Since 2004, however, the primary goal of this project has remained intact:

Provide its member agencies with access to important documents through a standard GIS application.

The three (3) major components of this project include: 1) the important documents that range from emergency contact info sheets to Sara Title III EHS Plans, 2) the standard GIS application in Boone County (BooneMap LT), and 3) the Access database used to tie everything together and act as the main repository for both creation and organization.

In October 2015, the document hyperlinking project included over 4,700 total documents, from the following categories:

Building PrePlans
Emergency Contact Sheets
Facility Crisis Plans
Facility Liaison Presentations

Material Safety Datasheets
Sara Title III EHS Plans
Tactical Worksheets

The documents can be accessed from the internet using the GIS Documents web app or locally on MDTs where internet access is limited.
